Completely Discreet Earpiece

Remain discretely in touch with this miniaturized receiver. All messages received through the user's two way radio are inductively relayed to the wireless earpiece in the user's ear. Inductive neckloop is easily hidden under the user's clothing for covert operations. Neckloop attaches to the user's Motorola surveillance kit providing completely discrete two way communications. Security operatives, public safety officials, and private investigators can communicate with ease without any visible equipment. Small as at is, it offers a full range of audio functions including automatic squelch, automatic gain control and noise filtering. Must be used in conjuction with a Motorola surveillance kit. Just remove the earpiece on any standard 2- or 3-wire surveillance kit and plug in the neckloop for completely discrete communication.

Ear Microphone System (EMS)

This compact unit picks up the voice through bone vibrations in the ear canal. The miniature earpiece leaves hands free and face unobscured when worn by rescue and hazard protection personnel, who still retain the ability for direct hearing and speaking. For personnel required to wear breathing apparatus, communications with protective masks are as clear as communications without. And its high speech clarity under noisy environments makes it ideal for high noise environments.
